ABSTRACT

This codebook is one of a series designed to document the data collection of the 1990-91 Schools and Staffing Survey (SASS). The series contains the variable names and position numbers for all survey and sampling data. All data have been imputed to compensate for item nonresponse. This volume contains the restricted use codebooks for the SASS Bureau of Indian Affairs (BIA) schools, teachers, and administrators, presented as appendixes O, P, and Q to the earlier volumes. Volume 1 provides the essential background information for the survey, and volumes 2 and 3 are codebooks for the restricted-use and public-use survey data. Codes in this volume relate to a sample of 97 BIA schools, a sample of teachers, and the administrators from these schools. BIA schools include those operated by the BIA and those operated by Indian tribes and tribal organizations. User notes discuss the sample design and sample allocation, the community type, school type, tribal affiliation, and the state or federally recognized tribe. (SLD)

Preface to Volume IV

This set of volumes is intended to document the data collection of the 1990-91 Schools and Staffing Survey (SASS) and is intended for several types of readers. The codebooks for each survey (Volume II-Restricted-Use Version, Volume III-Public-Use Version, and Volume IV-Restricted-Use Version Bureau of Indian Affairs (BIA) Schools, BIA school teachers, and BIA school administrators), contain the variable names and position numbers for all survey and sampling variables. All data variables have been imputed to compensate for item nonresponse. The imputation values may be identified by checking the status on any given record of the variable's imputation flag (F_varname). The imputation flags are listed at the end of each SASS component's codebook.

Volume IV is the restricted-use codebooks for the 1990-91 SASS BIA schools, teachers, and administrators. The sample contains 97 BIA schools, a sample of teachers and the administrators for those schools. The BIA schools can be categorized into two groups: (1) schools operated by the BIA or (2) schools operated by Indian tribes and tribal organizations under contract/grant with the BIA. The variable name on the school file is ISCHTYPE.

Volume I, the SASS documentation provides essential background information on the conduct of the survey. Copies of the questionnaires (with variable labels affixed as necessary) can be found in Appendix F. Appendix A is a set of definitions of terms used in the SASS surveys, such as Local Education Agency. Crosswalks between the 1987-88 and 1990-91 variables are in Appendix B. (This applies to other SASS components.) The SAS PROC CONTENTS is Appendix D. Appendix E is a number of cross-tabulated counts, both unweighted and weighted, for verification of programming results using the SASS datatapes. Those interested in the design and methodology of each SASS component may find the chapters on Sample Design and Implementation, Data Collection, Edit Procedures, and Imputations in Volume I to be useful. A caution concerning the use of prior year estimates for trend comparisons (Section XIII) should be read by all researchers. The sections on confidentiality measures, created variables, and the User's Notes (sections XIV-XVI) may also answer some questions.

We are interested in your reaction to the information presented here about the Schools and Staffing Survey data collection system as well as the microdata files we release. We welcome your recommendations for improving our survey work and data productions. If you have suggestions or comments or want more information, please contact:

Sample Design and Implementation

The schools associated with the BIA were identified in a separate frame from the public schools or the private schools. The list of BIA schools came from the Office of Indian Education's Program Education Directory from the BIA. The BIA directory of schools lists all schools funded by BIA and the Office of Indian Education by name of school, location, and the number of teachers and student. Approximately 180 schools were on the BIA Directory list. After the removal of schools that did not offer instruction, offered only kindergarten, or were already on the public sampling frame, there were 152 schools on the list of BIA schools that were eligible for sampling in SASS.

Sample Allocation

The first level of stratification was Arizona, New Mexico, South Dakota, and all other states. Within each state or group of states, the schools were stratified by elementary (school has only grades below 8th grade), secondary (school has grades between 7th and 12th), and combined (school has any other combination of grades).

Variables that Pertain to the BIA School, Teacher and Administrator Files

Several analysis variables unique to the BIA School restricted-use data file were created for data users' convenience:

1. Community Type (LOCALE)

The community type in which the school operates is based upon the Census definition of community size and its relation to urbanization or rural places (see Johnson, 1989)[1]. Although SASS collects a self-reported variable, it is subject to misclassification, because respondents tend to report the size of the immediate area without regard to its urban, suburban, or rural status. The self-reports community type has been replaced by one determined from the ZIP Code of the school, and matched to the Census community size for that ZIP Code. The LOCALE for the BIA Schools were derived by definition that all the BIA Schools are located on Indian Reservations in rural areas (LOCALE=7). Rural is defined as a place with fewer than 2,500 people or a place designated as rural by Census. The category LOCALE appears on all three files (school, teacher, and administrator.

2. Indian School Type (ISCHTYPE)

BIA School type is defined as either 1=BIA or 2=TRIBAL. This variable describes whether the BIA school is operated by the BIA or by Indian tribes and tribal organizations under contract/grant with the BIA. This variable (ISCHTYPE) appears on the school file.

---

[1] Johnson, Frank. (1989). Assigning Type of Locale Codes to the 1987-88 CCD Public School Universe. NCES Technical Report CS 89-194. Washington, DC: Office of Educational Research and Improvement.

3. Tribal Affiliation (TRIBAL)

On the School File a question is asked if that school uses Tribal affiliation for a special requirement for admission (TRIBAL).

4. State or Federal Recognized Tribe (TRIBE)

On the Teacher and the Administrator file the question of race is asked. If the respondent is American Indian/Alaskan Native, then they are asked if they are enrolled in a state or federally recognized tribe (TRIBE).

FINAL WEIGHT AND REPLICATE WEIGHTS

Variable Name	Source Code		Location	Description	Unweighted Frequencies
	Public	Private			
TCHWGT			19-27	Teacher final weight. This weight is the inverse of the probability of selection that has been adjusted for unusual circumstances affecting the probability of selection for nonresponse and for differences between the sample estimates and the known universe totals.	
				Minimum Value	1.43732
				Maximum Value	29.2854
				Mean	4.118194
				Standard Deviation	3.234911
REPWGT1- REPWGT48			28-459	Replicate weights for balanced repeated replication (BRR) variance estimation. These weights may be input into variance estimation software which uses the BRR estimation method. Rounded to 4 significant decimal places. Maximum number of digits is 9, including the decimal point.
